3. Simulate a random sample from the probability distribution with the following density function using inverse of cumulative density function:

$$f_X(x) = 5x2 \ 0 < x < 1 \ (1)$$

Draw the histogram (programming task).

A Sample of Continuous distribution function

$$F(x) = \begin{cases} 0 & x < 0, x > 1 \\ 5x^2 & 0 < x < 1 \end{cases}$$

Inverse of CDF:

$$\int_{0}^{1} 5x^{2} dx = \frac{5}{3}(x^{3})|_{0,1} =$$

$$CDF: \int_{-\infty}^{t} 5x^{2} dx = \frac{5}{3}(x^{3})|_{0,t} = \frac{5}{3}t^{3}.$$

$$RCDF: \rightarrow y = \frac{5}{3}x^{3} \rightarrow x = \sqrt[3]{\frac{3}{5}y}.$$

- Algorithm (Generating Random Number Sequence):
 - 1. generate $U \sim u(0,1)$
 - 2. $return \ g(u) = f^{-1}(u) \dots$
